Experience

StockX — Software Engineering Intern

June 2020 to August 2020

Increased service observability and developed gateway layer between clients and downstream microservices. Created internal backend interface. Handled ~30% of all StockX traffic.

Community Carecard — Founding Engineer

March 2020 to August 2020

Developed user-facing frontend, allowing customers to purchase virtual giftcards through Stripe Checkout and Connect products. Helped automate emails and create templates with AWS SES. Received \$1,000 grant from 1517 Fund.

All_ebt — Software Engineer

April 2019 to March 2020

Prototyped a Facebook chatbot. Reverse-engineered a government EBT balance web/mobile application (MITM). Integrated with the Stripe Issuing platform as part of the beta audience.

Timpli — Software Engineering Intern

June 2018 to September 2018

Created primary web interface for a student productivity platform. Integrated with RESTful APIs, Material Design elements, and a WYIWYG editor. Implemented features such as auto-save and image uploading.

Technologies

React, Vue, Node.js, Javascript / Typescript, GraphQL, AWS S3 / SES / DynamoDB, Serverless, Google Firestore / Cloud Functions, Java

Projects

[Newsletterize](#), [EasyRide](#), [Distinct](#), [Story For A Meal](#), [Pho Than Brothers](#)

Interests

Reading, basketball, Italian food, and the future.
